

In Order to Use the Machine Safely and for a Long Time

The fittings used for the machine are parts that degrade with age

Use of fittings for a long time (10 years or longer) decreases their reliabilities. Especially for resin fittings located at a part where a high load is applied, such as a high-pressure section, they may get broken.

For any fittings that may lead to water leakage or breakage of the machine if you do not replace them and continue to use them, it is recommended to replace them at intervals of 10 years.

If you want detailed information of the positions of the fittings that need to be replaced, or if you want them to be replaced, please contact DISCO. Any replacement work is chargeable.
